## Amendments to the Cialma

- 1. (Previously Presented) A method for the nuclear chlorination of orthoxylene, which comprises reacting ortho-xylene with a chichnating agent in the presence of at least one Friedel-Crafts catalyst and chlorine-substituted 2,8-dimethylphenoxathlin as co-catalyst, wherein the ratio of 4-chicno- to 3-chloro-1,2-dimethylbenzene is at least 3:1.
- (Previously Presented) The method as claimed in daim 1, wherein tetrachlarinated 2,8-dimethylphenoxarihin is used.
- (Previously Prosented) The method as claimed in claim 1, wherein elements chlorbe or suffuryl chloride is used as chlorinating agent.
- 4. (Previously Presented) The method as claimed in claim 1, wherein the co-catalyst is used in an amount of from 0.001 to 6% by weight, based on the amount of the ortho-xylane used.
- 5. (Previously Presented) The method as claimed in claim 1, wherein the ratio of Friedel-Crafts catalyst or its precursor to the co-catalyst is in the range from 500:1 to 1:5.
- (Previously Presented) The method as claimed in claim 1, wherein the method is carried out without addition of a solvent.
- 7. (Previously Presented) The method as daimed in daim 1, wherein the method is carried out at a temperature in the range from -20 to +120°C.

\* NAe:

claims are not amended. The claims presented here are identical to those presented on 8/25/04. Thus there is no need to enter these claims, since they have already been entered.

Attorney's Docket: 2002DE31 Serial No:: 10/059,56

Response to Final Rolection Matted 02/25/2

(Previously Presented) The method as claimed in claim 1, wherein the amount of the chiorinating agant used is selected such that a degree of chlorination of eignificantly greater than 1 results.

(Previously Presented) The method as claimed in dalm 2, wherein 1,3,7,9-tetrachioro-2,8-dimetry/phenoxathlin of the formula

is used.

(Previously Presented) The method as claimed in dalm 2, wherein elemental chlorine or suffuryl chloride is used as chlorinating agent. 11. (Previously Presented) The method as claimed in claim 2, wherein the co-catalyst is used in an amount of from 0.001 to 6% by weight, based on the amount of the artho-xylene used.

ratio of Priedel-Crafts catalyst or its precursor to the co-catalyst is in the range (Previously Presented) The method as claimed dalm 2, wherein the from 500:1 to 1:5.

13. (Praviously Presented). The method as daimed claim 3, wherein the method is carried out without addition of a solvent. (Previously Presented) The method as cialmed in dalm 3, wherein the method is carried out at a temperature in the range from -20 to +120°C.

Response to Final Rejection Mallad 92/25/2005

(Previously Presented) The method as claimed in claim 3, wherein the

emount of the chlorinating agent used is selected auch that a degree of chorination of significantly greater than 1 results.
